

EASY INSTRUCTIONS:

Open pouch, snip the edge of the lure and separate to the center. Lure will clip directly onto plant stem. Place where aphids and other insects are present. Do not touch lure with hands; use gloves or tweezers. Replace lures every 3 to 4 weeks.

Do not use with toxic pesticides. Store in a cool dry place.

HELPFUL HINTS:

Use Lady Bug Lures throughout the season to keep beneficial insects in your garden. Use Aphid/Whitefly Traps early in the season to reduce and prevent aphid infestations. Lady Bug Lures contain a pheromone that acts like a magnet that tells beneficial insects where to find food. Beneficial insects drawn to your garden will search and destroy pests, and then move on looking for more food. Use Lady Bug Lures with live lady bugs to keep them in your garden longer.

simply snip
and clip
on infested
plants!
