

# APPLE MAGGOT TRAP

Effective - Safe - Non-Toxic!

## EASY ASSEMBLY

Assemble red trap spheres. They only go together one way! Attach hanger on one end of trap.

Assemble Traps

We suggest wrapping a sandwich bag or ceran wrap around the sphere before applying glue. That way you can simply peel the plastic off to remove the glue and insects from the trap before re-using it.

For the glue, we recommend placing the glue tube in hot water for a few minutes to soften the glue. Use the spreader to remove the glue from the tube and apply to the sphere. Spread about a 1/16" thick layer.

Apply Glue

Spread Glue

Open white packet and attach Apple Maggot Lure to hanger with a twist tie. Hang the trap in your fruit tree. In case of contact, remove excess glue with vegetable oil.

Attach Lure

**APPLES**  
**PEARS**  
**PLUMS**  
**CHERRIES**  
**BLUEBERRIES**

Place traps in trees 1 to 2 weeks before bud break and leave them there for the season.

Safe for organic uses,  
contains no pesticides.  
Place out of reach of  
children and pets.

### TO MONITOR APPLE MAGGOTS

use all 3 traps  
in an orchard.

### TO CONTROL APPLE MAGGOTS

use 2 traps per  
dwarf tree and  
3 traps per large tree.
