

Kitchen Fruit Fly Trap

EASY INSTRUCTIONS:

Remove the lid from the jar. Fill jar half full with warm tap water. The lure packet will dissolve in water, just add the lure packet to the jar. Add 1 or 2 drops of (non-citrus fragrance) dish soap. Screw the lid onto the jar and open the flapper lid, with the small holes only. Place the trap about 2 feet from where fruit flies are congregating.

WASH HANDS AFTER HANDLING BAIT
KEEP BAIT AND TRAP OUT OF REACH OF CHILDREN AND PETS.

Long term use of the Kitchen Fruit Fly Trap will reduce troubling infestations without the use of toxic chemicals. Safe for use in food-handling and food storage areas.

HELPFUL HINTS: Place traps in counters near fruit or under cupboards near garbage containers or recycle bins. Allow at least 48 hours for the bait to become effective. You may need to move the trap after 3 or 4 days to improve catches. Lure solution is effective for 10 to 14 days, depending on weather and fly populations. Dispose of full traps in regular garbage when full of flies. Cleaning up sources of fruit flies will help reduce population buildup.
