

FLOUR MOTH FACTS:

The trap attracts and captures adult flour moths such as Indian meal moth, Mediterranean flour moth, almond moth and raisin moth. These insects occur almost everywhere and are attracted by stored foods. The moths lay eggs in cracks and crevasses in shelving, cupboards and pantries. After a larva stage, adult moths emerge and fly around looking for mates. The Flour & Pantry Moth Trap uses the same pheromone attractant that female moths use to attract males. Moths are drawn by the scent and are killed by the glue in the trap.

No toxic materials are used to kill the moths. Replace trap every 3 months or sooner if full. Use at least 2 traps and not more than 4 traps at a time. Long term use of the Flour & Pantry Moth Trap will reduce troubling infestations without the use of toxic chemicals.
